

# Master Design System & Token Specification

Comprehensive design system featuring 150+ reusable components, semantic color tokens, elevation layers, and typography scales.

Role: Design Engineer | Timeline: 2023 · 2025 | Tools: Figma Tokens, CSS Custom Properties, Storybook

## 01 Design System Philosophy

Bridging the gap between Figma vector components and production CSS variables. Built with strict token hierarchies (Base -> Semantic -> Component).

Designed for cross-theme accessibility, high contrast ratios, and modular flexibility across mobile and desktop interfaces.

## 02 Component Architecture & Tokens

Color Tokens: HSL-tailored primary, secondary, surface, and state palettes.

Typography: JetBrains Mono for technical telemetry, Plus Jakarta Sans for UI readability, and Space Grotesk for bold headers.

Components: 150+ interactive variants including glass cards, modal portals, circular gauges, telemetry charts, and animated buttons.
