

FocusMate · Productivity App for Remote Workers

Smart task batching, focus timers & energy tracking designed to combat remote work burnout.

Role: Lead Product Designer | Timeline: 2024 | Tools: Figma, React, Usability Testing

01 The Problem & User Insight

Remote knowledge workers suffer from context switching and digital fatigue. Standard to-do lists fail because they do not account for circadian energy dips or asynchronous collaboration interruptions.

FocusMate was designed to dynamically schedule tasks according to user energy levels and enforce deep work intervals.

02 Key Solutions & Validation

Built adaptive Pomodoro rhythms with ambient soundscapes and automated Slack status synchronization.

Usability tests demonstrated a 42% decrease in self-reported end-of-day fatigue and a 28% increase in completed focus blocks.
