

Mindful · Mental Health Tracking & Emotional Support

Gentle mood check-ins, guided micro-breathing & clinical therapist sync in a privacy-first mobile UX.

Role: UX Researcher & Designer | Timeline: 2024 | Tools: Figma, HFI Frameworks, Maze

01 The Challenge

Users experiencing anxiety often find clinical mood tracking overwhelming and intrusive. Traditional psychiatric forms cause clinical fatigue and immediate app abandonment.

Mindful replaces clinical scales with visceral, non-judgmental somatic check-ins and haptic breathing exercises.

02 Outcome & Clinical Impact

88% of participants completed daily check-ins for 30 consecutive days.

Emergency grounding breathing tool reduced acute panic symptom duration by an average of 4.5 minutes.
