

WavePlay · Spatial Audio & Podcast Ecosystem

Seamless audio switching, hum-to-search discovery & interactive chapter timestamps for audiophiles.

Role: Creative Technologist & UX Designer | Timeline: 2024 | Tools: Figma, Audio Telemetry, Micro-Interactions

01 Audio Discovery Friction

Switching between spoken word podcasts and music playlists disrupts user mental flow and creates cluttered listening queues.

WavePlay automatically adapts EQ curves and interface density depending on whether the user is listening to talk audio or spatial music.

02 Listener Engagement

Daily session listening time increased by 38 minutes per active user.

Hum-to-search voice query successfully resolved 84% of obscured track queries.
